## **DETAILED ACTION**

### ***Allowable Subject Matter***

Claims 2, 4, 6 and 8 are allowed.

Regarding independent claims 2 and 4, the closest prior art to the instant invention is (JP 11-104916). '916 teaches a chamfering tool having a cutting face (3) having an outer surface which is formed by a curved surface, the outer surface having a first blade section (2a: see below) which is tilted (by an angle  $\alpha$ ) so that a chip is discharged to one side of the edge, and a second blade section (2b: separated by a gap) which is tilted (by an angle ' $\alpha$ ') so that the chip is discharged to the other side different from the former side in a sliding direction of the cutting section ('916, figures 1, 3, 9). Note: cutting face (3) tilted so as to face one side of the edge ('916, figure 2a. note that figure 2 shows only one blade but figure 9 is another embodiment with two blades). Furthermore, '916 teaches the first angle faces in X direction while the second angle faces in Y direction which is different than the X direction (see figure below). Furthermore, '916 teaches figures 3-6, said chamfering tool having a shank section that is attached to a rotational chuck on the opposite side of the cutting section.

However, '916 fails to anticipate or make obvious the a chip cut from the edge of the object in a first direction by said first cutting face being cut in a second direction by said second cutting face to remove it from the edge of the object.
